

Preparation : Print this sheet onto cardboard. Cut out the individual numbers.

Play : Place all the cards in the middle, between two players. (The cards could be face up or face down, depending on whether you want a game of skill or chance.) Players take turns to take a card. The winner is the first player to get three cards that add up to 15.

Examples :

- If Player 1 takes cards 1,2,3,4,5, he has not won, because although $1+2+3+4+5 = 15$, this is five cards, not three.
- If Player 2 takes cards 1,3,5,7, she has won, since $3+5+7 = 15$.
